uPVC Windows

Britelite have an extensive choice of window styles to suit any home including casement, bay, tilt & turn and sliding sash, in frames made of uPVC or aluminium and finished in a choice of colours, you can even match the handles.

Britelite's double or triple glazed windows are a fantastic addition to any home. Our products are safe, secure and brilliant at keeping the warmth in. Britelite Windows will even add value to your property when the time comes to sell. With an enormous range of colours, styles and sizes to choose from, a Britelite Window will perfectly compliment your home. No matter what type of home you have, be it a two story house, bungalow, town house, or a flat, Britelite has a product to suit. All our double glazing and triple glazing are made to fit your home and taste.

Britelite's double or triple glazed windows are a fantastic addition to any home.

Britelite has the coveted BSI Kitemark for all the products we install, so you can rest assured that Britelite's staff will do their utmost to make your installation a pleasant experience. Once the installation is complete, a senior fitter will carry out a final inspection which will include maintenance tips and advice to help you get the best out of your windows for years to come. What's more, your installation will come with a fully transferable 10 Year Guarantee

Sliding Sash Windows

Our uPVC sash windows are among the highest quality and most durable fenestration products available. Our uPVC profiles are multi chambered having a significant impact on its strength and efficiency. With no risk of warping or rusting, there's no reason not to seriously consider uPVC sash windows.

Modern windows no longer require sash horns, but they can be optionally specified to give the visual appearance of traditional timber box sash windows.

We are also able to offer a deep bottom rail option for replicating existing windows. A true heritage uPVC design is now available with the added benefit of improved visual aesthetic appeal.

Our uPVC sliding sash windows come with an easy clean tilt facility as standard (same exclusions apply), which allows both top and bottom sash to tilt inwards.

With all of our windows, you have the opportunity to request SBD (Secured by Design). SBD focuses on crime prevention of homes and commercial premises and promotes the use of security standards for a wide range of applications and products, including windows and doors helping to put the resident at ease.

The glass specification is the most significant component when affecting the windows overall thermal efficiency. Each sliding sash window is supplied as standard with 24mm double glazed high performance units and manufactured in accordance with British Standards.

Traditional Windows

The story of our Traditional Windows starts in Gloucestershire in 2011. With considerable experience within the window and door industry, we noticed a sizeable gap in the existing marketplace. What if you wanted a 19th Century flush sash timber window, but with all the benefits of uPVC? The idea soon became reality. A bespoke systems house was formed to develop specific products for niche, heritage markets.

We then went on a journey to design a window and door system where tradition meets modern day manufacturing and extrusion processes. The Traditional Window was born. Every aesthetic feature of the Traditional Window is associated with the bygone age of craftsmanship including flush sash to the outside of the window and options such as deep Georgian bar, forged black or pewter hardware, monkey tail handles and peg stays. Though the styling is clearly a fusion of traditional design and sightlines, the modern day materials and 9 chamber design offer enhanced thermal properties, high security options and are virtually maintenance free.

The Traditional Window system is designed to replicate 19th Century timber windows, but fuses traditional aesthetics with modern materials to create a window that is both elegant and energy efficient. The perfectly flush exterior recreates a true timber alternative aesthetic, whilst the interior is stylishly decorative, creating a classic home feel. The modern material is virtually maintenance free; no painting or staining required. Cleaning your windows needs minimum effort meaning they look newer for longer, leaving you time to do more of the things you love.

Traditional windows out perform many other window systems due to the combination of sophisticated design, innovation and technological advancements. You can choose from highly efficient double or triple glazed units, attaining U-values of 0.8 with triple glazing, PassivHaus Standard, and 1.2 with double glazing, far surpassing the British Building Regulation requirements. All of this contributes to lower energy bills, keeping you cosy in the winter and cool in the summer.

Secondary Glazing

Thanks to the unique soundproofing capabilities, Britelite secondary glazing can reduce the noise pollution caused by various sources. For many homeowners, traffic noise is their biggest concern. In these instances, Britelite secondary glazing with correctly fitted thicker glass can make a world of difference.

Warmth is a valuable commodity and creating a second barrier to the elements is an ideal way to reduce wasteful thermal heat loss. In fact, there are few better ways.

The creation of an insulating layer of air is as important in the retention of energy as the fitment and seals. With the right glass, the result can be a reduction in heat loss by as much as 65%.

For thermal insulation, low-E glass (optional) is often the best choice because the glazing has been designed and engineered to provide:

- ✓ the very best single glazing insulation
- ✓ maximum energy conservation
- ✓ an extremely discreet installation
- ✓ an environmentally friendly solution
- ✓ an affordable investment

Horizontal sliding windows are versatile and provide easy access to the outer window. The sashes slide within the frame, so few problems are encountered with blinds, curtains or ceiling bulkheads. Individual windows can be linked with mullions and transoms allowing large and ribbon windows to be treated.
